## Unleash FileMaker®

The turn-key appliance Xpress for FileMaker (XFM) runs FileMaker Server on multi-core processors and the fastest storage technology in the world. Customers enjoy fast backups, convenient recovery, and increased FileMaker performance.

**FileMaker**  
BUSINESS ALLIANCE

### 1 second 1 touch

Want to enable your solution to reach new levels of reliability and performance? Want to bring your solution to the next level of business class service? The XFM backs up FileMaker in about a second, and a click of a button can restore it in a few moments. Restore in less time than it takes to pump gas at the station — right from your iPhone. XFMs can store up to about 1/2 *tera-byte* of active FileMaker data. Customers report significant performance improvements, to boot.

### scalability

With a Windows front-end and Xpress storage backend, the XFM may be linearly scaled. Whenever you need more power or increased database capacity, you have the power to supplement your solution at a lower cost.

### geo-synced replication

By purchasing an XFM, you'll receive a professional backup and retention schedule, saving your solution at scheduled points in time, by default every 15 minutes. Geo-syncing multiple XFMs at different sites replicates backups in real-time providing passive failover in case of natural disaster. If an entire data center fails, a second geo-synced XFM will have an up-to-date copy of your solution's most recent backup. Two XFMs will provide two-way failover, three XFMs provide three-way failover, and so on. Best of all, multiple XFMs will stay synchronized with point-in-time backups so you know what you have and when you have it. Click! And you're back up and running in a moment, at one site or another, *even if an entire data center goes down*.

### benefits

Business owners will know that their data is quickly recoverable should the worst ever happen. FileMaker administrators will know that backup protection is automatic and recovery is easy. The XFM enables FileMaker value to reach the next stage of its potential.

<b>Backup Time</b>	About one second (1/2 TB active storage)
<b>Restore Time</b>	Seconds to minutes (1/2 TB active storage)
<b>Form Factor</b>	Rackable 5-6U depending upon configuration
<b>Processors</b>	Intel Xeon, 4-36 cores
<b>Processor Sockets</b>	1-2
<b>Disk Drives</b>	Hot swappable RAID for Windows & backups
<b>Database Capacity</b>	64GB-1/2TB, RAID protected
<b>Communications</b>	100 BaseT, GigE (auto-sensing)
<b>Operating System</b>	Windows Server 2008 R2, manufacturer-supplied license
<b>FileMaker Version</b>	FileMaker Server 10, 11, or 12, user-supplied license
<b>Backup Types</b>	
<b>XFM Standard</b>	User configurable Default: every 15 minutes for 2 hours, every hour for a day, & every day for a week Elastic backup storage can retain up to thousands and months of backups
<b>FileMaker</b>	FileMaker progressive backups (reduces XFM storage size)
<b>Geo-Sync</b>	Multi-unit, multi-site, user configurable, real-time synchronize backups across geography for disaster recovery against data center failure
<b>Backup Retrieval</b>	Through standard file share or web interface
<b>Management</b>	Web browser Remote, automated notification of machine health
<b>System Health</b>	Appliance monitors CPU, temperature, motherboard, fans, disks, software, etc. Integrated logic for health maintenance & uninterruptable power supply (UPS)
<b>Power Supplies</b>	
<b>Type</b>	350-1100 watts, redundant, hot-swappable USA UL listed, FCC; Canada CUL listed; Germany TUV Certified; EN 60950/IEC 60950-Compliant; CB Report; CCC Certification
<b>Number</b>	1-4
<b>Warranty</b>	World-wide support under contract
